The channel setting is a technique that involves setting diamonds into a channel or groove in the metal. The stones are set side by side in a straight line and the tables of the diamonds are essentially flush with the metal at the top of the channel. Channel setting creates a clean modern look with no prongs to break or catch on things.

Setting Type Guide There are a variety of setting techniques used to secure and set loose diamonds and gems. For example, the classic prong setting gives a diamond greater prominence while reducing the appearance of the metal, while a bezel setting creates the illusion of a larger diamond and adds a more dramatic effect.
