The preparation of RMs for calibration is also part of the scope of ISO Guides 34 and 35. The treatment in this Guide is limited to the fundamentals of small-scale preparation of RMs and the value assignment, as used by laboratories to calibrate their equipment. Larger scale production of such RMs, with the possible aim of distribution is beyond the scope of this Guide. This type of activity is covered in ISO Guides 34 and 35.

There are many academic references describing how RMs are made, but few that explain why they are used, how they should be used and what happens when they are not properly used. In order to fill this gap, the editors have taken the contributions of more than thirty RM practitioners to produce a highly readable text organized in nine chapters. Starting with an introduction to historical, theoretical and technical requirements, the book goes on to examine all aspects of RM production from planning, preparation through analysis to certification, reviews recent development areas, RMs for life analysis and some important general application fields, considers the proper usage of RMs, gives advice on availability and sources of information and lastly looks at future trends and needs for RMs. This book is intended to be a single point of information that both guides the reader through the use of RMs and serves as a primary reference source. It should be on the reading list of anyone working in an analytical laboratory and be found on the library shelf of all analytical chemical laboratories.

This paper argues that nonfinancial risk management is an essential element of good governance of central banks. It provides a funnelled analysis, on the basis of selected literature, by (i) presenting an outline of central bank governance in general; (ii) zooming in on internal governance and organization issues of central banks; (iii) highlighting the main issues with nonfinancial risk management; and (iv) ending with recommendations for future work. It shows how attention for nonfinancial risk management has been growing, and how this has amplified the call for better governance of central banks. It stresses that in the area of nonfinancial risk management there are no crucial differences between commercial and central banks: both have people, processes, procedures, and structures. It highlights policy areas to be explored.
