Master Data Analytics Hands-On by Solving Fascinating Problems You ' ll Actually Enjoy! Harvard Business Review recently called data science “ The Sexiest Job of the 21st Century. ” It ' s not just sexy: For millions of managers, analysts, and students who need to solve real business problems, it ' s indispensable. Unfortunately, there ' s been nothing easy about learning data science—until now. Getting Started with Data Science takes its inspiration from worldwide best-sellers like Freakonomics and Malcolm Gladwell ' s Outliers: It teaches through a powerful narrative packed with unforgettable stories. Murtaza Haider offers informative, jargon-free coverage of basic theory and technique, backed with plenty of vivid examples and hands-on practice opportunities. Everything ' s software and platform agnostic, so you can learn data science whether you work with R, Stata, SPSS, or SAS. Best of all, Haider teaches a crucial skillset most data science books ignore: how to tell powerful stories using graphics and tables. Every chapter is built around real research challenges, so you ' ll always know why you ' re doing what you ' re doing. You ' ll master data science by answering fascinating questions, such as: • Are religious individuals more or less likely to have extramarital affairs? • Do attractive professors get better teaching evaluations? • Does the higher price of cigarettes deter smoking? • What determines housing prices more: lot size or the number of bedrooms? • How do teenagers and older people differ in the way they use social media? • Who is more likely to use online dating services? • Why do some purchase iPhones and others Blackberry devices? • Does the presence of children influence a family ' s spending on alcohol? For each problem, you ' ll walk through defining your question and the answers you ' ll need; exploring how others have approached similar challenges; selecting your data and methods; generating your statistics; organizing your report; and telling your story. Throughout, the focus is squarely on what matters most: transforming data into insights that are clear, accurate, and can be acted upon.

MicroRNAs are small non-coding RNAs involved in post-transcriptional regulation of gene expression. Thousands of miRNAs have been identified in different organisms including viruses, insects, plants and animals. MiRNAs has emerged as key regulators of important biological processes. The differential expression of miRNAs in various human diseases has made them potential candidates for developing novel therapies and personalized medicines. This book is focused on microRNA let-7, the second miRNA discovered in the year 2000 and one of the most studied miRNA. This book discusses various aspects of miRNA let-7 starting from its discovery, biogenesis, transcriptional and posttranscriptional regulation to its crucial role in various fundamental cellular processes such as development, stem cell maintenance and differentiation, regulation of signalling pathways in cancer, drug resistance and therapeutic potential in different human diseases.

Longarm fires up Hell ' s Half Acre! After U.S. Deputy Marshal Custis Long blasts a killer to hell in an epic gunfight, he seeks respite in Hell ' s Half Acre. Notorious beyond its size, Fort Worth ' s “ Acre ” features bullet-riddled corpses and scores of barely dressed women, drunks, gamblers, tinhorns, outlaws, cowboys and tradesmen. What better place for a marshal to vacation? But, sooner than later, the bad guys in Hell ' s Half Acre need reminding that there ' s no rest for the wicked—or for the lawman known as Longarm who blows them to blazes.

Independent checkpointing allows maximum process autonomy but suffers from potential domino effects. Coordinated checkpointing eliminates the domino effect by sacrificing a certain degree of process autonomy. In this paper, we propose the technique of lazy checkpoint coordination which preserves process autonomy while employing communication-induced checkpoint coordination for bounding rollback propagation. The introduction of the notion of laziness allows a flexible trade-off between the cost for checkpoint coordination and the average rollback distance. Worst-case overhead analysis provides a means for estimating the extra checkpoint overhead. Communication trace-driven simulation for several parallel programs is used to evaluate the benefits of the proposed scheme for real applications. Wang, Yi-Min and Fuchs, W.
